

Hello Arun App

Project Documentation

Tech Stack

Layer	Technology
Mobile App	React Native + Expo
Mobile Language	TypeScript
Backend	Python + FastAPI
API Server	Uvicorn
ORM	SQLAlchemy
Database	PostgreSQL
Database Driver	Psycopg
Android Build	Expo EAS
Development	Windows + WSL Ubuntu

Data & Control Flow

Hello Arun App

Project Documentation

[FastAPI] JSON Response

|

v

[React Native App] Displays "Hello Arun"

Current Development Architecture

[Android App]

|

v

Local Wi-Fi

|

v

[Windows Laptop]

|

v

WSL Ubuntu

|

v

[FastAPI]

|

v

[PostgreSQL]

Summary

In simple terms: The React Native mobile app sends the user's name to the Python FastAPI backend. The backend stores the data in PostgreSQL, then sends the result back to the mobile app, which displays the response.
